

1. Cloud-Based Community Problem Reporting and Resolution System

Problem Statement

Citizens often face problems such as damaged roads, water supply issues, sanitation concerns, and public infrastructure problems. Traditional complaint methods such as phone calls, paper forms, and office visits can result in delays and make it difficult for citizens to track the status of their complaints. A cloud-based community problem reporting and resolution system can provide a centralized digital platform where citizens can report problems and government authorities can assign, track, and resolve complaints efficiently.

High-Level System Architecture

...

Cloud Implementation

- API Gateway for secure request routing
- Authentication service for citizens, officers, and administrators
- Complaint management service for creating and managing complaints
- Assignment service for assigning complaints to responsible departments
- Status tracking service for monitoring complaint progress
- Cloud storage for complaint images and supporting documents
- Notification service for complaint updates
- Cloud database for storing complaint and user information
- Analytics engine for reports and identifying common problems

2. Cloud-Based Digital Legal Case Management System

Problem Statement

Legal professionals and clients often use emails, physical documents, and separate applications to manage legal cases. This can make it difficult to track case progress, securely store important documents, schedule appointments, and communicate effectively. A cloud-based digital legal case management system can centralize case information and provide secure access to clients, lawyers, and administrators from any location.

High-Level System Architecture

Cloud Implementation

- API Gateway for secure communication between users and services

- Authentication and role-based access control
- Case management service for creating and tracking legal cases
- Document management service for secure file handling
- Cloud storage for legal documents and evidence
- Appointment scheduling service for consultations
- Notification service for case updates and reminders
- Cloud database for case, user, and appointment information
- Analytics engine for case reports and workload monitoring

3. Cloud-Based Student Skill Development and Career Guidance Platform

Problem Statement

Students often struggle to identify the skills required for their desired careers. Learning resources, assessments, certificates, and career guidance may be spread across different platforms, making it difficult to track progress. A cloud-based student skill development and career guidance platform can bring these activities together and provide personalized learning plans, skill assessments, and career recommendations.

High-Level System Architecture

```

text id="j9f2u5" +-----+ | STUDENTS | | Web / Mobile App | +-----+ +-----+ | | +-----+
v-----+ | MENTORS | | Mentor Portal | +-----+ +-----+ | +-----+ v-----+ | ADMIN | | Admin
Dashboard | +-----+ +-----+ | v Internet / HTTPS | v +-----+ +-----+ | API GATEWAY | +-----+
+-----+ | -----+ | | | | v v v v v

```

...

Cloud Implementation

- Secure authentication for students, mentors, and administrators
- Learning management service for courses and learning plans
- Online skill assessment service
- Career recommendation engine based on skills and assessment results
- Cloud storage for certificates and learning materials
- Cloud database for student profiles and progress records
- Notification service for reminders and updates
- Analytics engine for tracking learning performance
- Role-based access control for different users

4. Cloud-Based Freelance Project Collaboration and Management System

Problem Statement

Freelancers and clients often use multiple applications for communication, file sharing, task management, and project tracking. Using separate platforms can lead to communication problems, missed deadlines, and difficulty in monitoring project progress. A cloud-based freelance project collaboration system can provide a centralized workspace for managing projects, tasks, documents, and communication.

High-Level System Architecture

	Project Files		Project Reports	
	+-----+		+-----+	

Cloud Implementation

- API Gateway for routing requests
- Secure authentication and user profile management
- Project management service for creating and organizing projects
- Task management service for assigning and tracking tasks
- Cloud storage for project documents and shared files
- Notification service for deadlines and project updates
- Cloud database for projects, tasks, and user information
- Analytics engine for project performance reports
- Role-based access control for clients, freelancers, and administrators

5. Cloud-Based Digital Event and Conference Management System

Problem Statement

Organizing events and conferences involves managing registrations, speakers, schedules, participants, documents, and announcements. These activities are often managed using spreadsheets and different communication applications, creating confusion and increasing administrative work. A cloud-based digital event and conference management system can centralize all event activities and provide real-time information to attendees, organizers, speakers, and administrators.

High-Level System Architecture

```

""text id="icr3uy" +-----+ | ATTENDEES | | Web / Mobile App | +-----+-----+ | | +-----
v-----+ | ORGANIZERS | | Organizer Portal | +-----+-----+ | | +-----v-----+ | SPEAKERS /
ADMIN | | Admin Dashboard | +-----+-----+ | v Internet / HTTPS | v +-----+-----+ | API GATEWAY
| +-----+-----+ | ----- | | | | v v v v v

```

...

Cloud Implementation

- API Gateway for handling and routing application requests
- Secure authentication for attendees, organizers, speakers, and administrators
- Online registration and participant management service
- Event and session schedule management service
- Content management service for presentations and event materials
- Cloud storage for event documents and conference resources
- Notification service for announcements and schedule changes
- Cloud database for event, speaker, and participant information
- Analytics engine for registration and participation reports
- Auto-scaling to manage high traffic during event registration
